1.0 Introduction

Welcome to CPSC ICT Laboratories! The College provides students and faculty with computer laboratories and information technology resources that support learning, discovery, and services. This provision will assist students and faculty to respond to their individual academic demands.

The College of Business Management has 2 computer laboratories. These are CBM Computer Laboratory 1 and 2, which are both located on the 3rd floor of the Multi-purpose Building. Meanwhile, the College of Health Services Computer Laboratory is located on the 2nd floor of the same building. The College of Computer Studies has IT, CS, LIS, MAC Lab, Learning Lab, NAS, SAP, MAT, and Aircode computer laboratories located at IT Bldg. The College of Engineering is located on the 2nd floor, Laboratory and Shop Building. The College of Arts and Sciences occupies the IT computer laboratory for their hands-on activities.

These laboratories are open from 7:00 am to 7:00 pm, depending on the computer laboratory class schedule assigned to each laboratory. All these laboratories operate from Monday to Friday for the undergraduate courses and on Saturday for the graduate courses.

The manual covers the guidelines, rules, and regulations for utilizing the services of the laboratories, software; hardware; and open laboratories. It also includes the duties and roles of instructors; guidelines for the maintenance of the laboratories; and job descriptions of the laboratory-in-charge and computer technicians, which will ensure a conducive learning environment. It further features the students' and other users' responsibilities, which in turn will safeguard and secure the computer laboratories.

2.0 Rationale

Camarines Sur Polytechnic Colleges has state-of-the-art laboratories and computing facilities for students and faculty. The CSPC ICT Laboratory Manual is crafted to provide students and faculty with equitable access to university computing resources and to ensure that the areas provided maintain an atmosphere that is suitable for excellent academic performance.

The CSPC ICT Laboratory Manual is meant for all laboratories in all colleges to assist students and faculty with proper computer equipment and peripheral management. Also, to instill ideals of ownership and discipline in end-users in such a manner that they would take excellent care of the computer equipment assigned to them.

Sets of rules and guidelines are stated in the CSPC Integrated Laboratory Manual. However, specific and separate rules and guidelines for faculty and students are not stipulated. Furthermore, as mentioned in Section IV, each college must have a separate and independent operational manual as the guiding principle in utilizing the laboratory. Moreover, there is no stated policy regarding the reasons for disposal, replacement, and upgrading of a computer unit.

3.0 Legal Basis

Camarines Sur Polytechnic Colleges' Information and Communication Technology Resources (CSPC-ICTR) Policy	Section X-Virus prevention; Section XV – User Cooperation; Section XVI - Prohibited Acts and Uses of CSPC ICTR; Section XVII- Disciplinary Action
Work-Instructions for Maintenance and Repair	Date of Effectivity: February 25, 2020, version 1
Work-Instructions for Disposal	Date of Effectivity: February 25, 2020, version 1
Student Handbook	Chapter 6. Other prohibited acts; Part 5 Title IV: Student Disciplinary and Non-Disciplinary Cases, Chapter 1- General Policies, Art. 46.
CSPC Integrated Laboratory Manual	VIII. Components of CSPC Integrated Laboratory Manual. Sec. 5 Recordkeeping, 6. Record Log; IX. Organizational Chart of CSPC Integrated Laboratory Manual X. Roles and Responsibilities IV. Legal basis for Adopting an Integrated Laboratory Manual for All Programs and Science Courses.

4.0 Objectives and Purpose

This operation manual will serve as guidelines for the students and faculty in utilizing the equipment in the CSPC ICT laboratories. (Please refer to the Integrated Laboratory Manual.)

5.0 Definition of Terms

Given are the terms that have been operationally defined and interpreted for the purpose of clarity in understanding the said manual.

5.1 Computer Hardware

-contains many electric, electronic, and mechanical components.

5.2 Computer Software

- set of instructions, data or programs used to operate computers and execute specific tasks.

5.3 Peripherals

-is the collection of external devices that provides input and output for **the computer, such as a disk drive, monitor, printer, mouse, and keyboard.**

5.4 ICT Laboratory

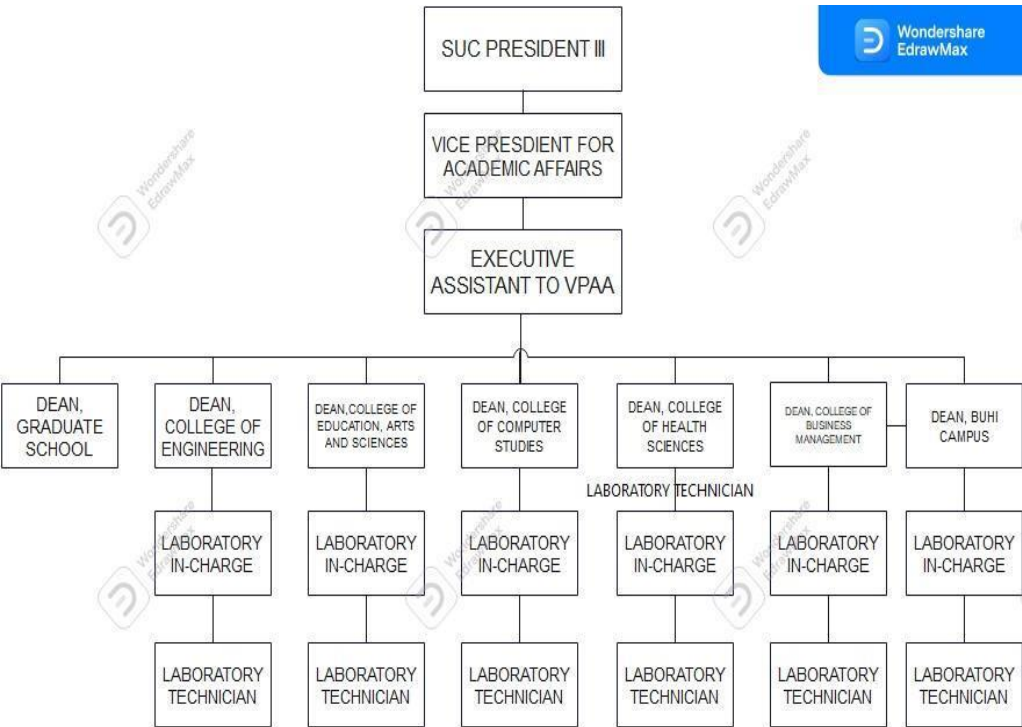

-refers to information communication space where coding and other related hands-on activity took place.

5.5 Open - Laboratory

-is a space where students can go to put their skills into practice at their own pace and according to their own needs.

6.0 **Organizational Chart of the CSPC ICT Laboratory Manual**

The efficiency of every laboratory depends on the functionality and support of the administration. Therefore, it is a mandate to create and develop an organizational chart that will ensure the efficient delivery of services for students and faculty.

6.1 Roles and Responsibilities

6.1.1 CSPC-College Laboratory Safety Committee

The committee consists of the Vice-President for Academic Affairs as the Chairperson, assisted by the Executive Assistant as its Vice-Chairperson, the Deans of the Colleges, and the Buhi Campus Director as members.

The committee shall responsibly and faithfully carry out the policies and procedures stated in the CSPC Computer Laboratory Manual, perform an annual inspection of each laboratory, and discuss ways to improve overall safety. The committee will meet once per semester.

6.1.2 Roles and Responsibilities of the College Dean

The Dean of the College is responsible for all units' laboratory safety under his authority. He is also responsible for overseeing the implementation of laboratory safety procedures and policies in the college. The Dean is responsible for identifying individuals to serve as the laboratory in charge with the approval of the Vice President for Academic Affairs.

6.1.2.3 Duties and Functions of the Laboratory-in-Charge

The laboratory in charge is directly responsible for the safety of the people working in their laboratory. As such, he oversees and, if necessary, supervises the students' laboratory work even in the faculty's presence. The purpose is to ensure the utmost safety inside the laboratory. However, in laboratory

exercises in compliance with the standard curriculum or syllabus, the faculty member has the sole and exclusive authority to implement it.

The specific duties and functions are to wit:

- supervise the function of the laboratory.
- plans and monitors an annual budget for laboratory and lecture hall operations for the normal academic year and for the summer school program.
- Identify improvements that better meet course and professional objectives.
- Develop policies and procedures to ensure fair and equitable treatment of students and laboratory instructors.
- Prepare a purchase request for the needed equipment.
- Monitoring monthly preventive check of the laboratory technician
- Recommends new equipment for the laboratories' utilization.
- Monitor inventory of supplies and daily laboratory usage.
- Provide periodic back up of stored data and prepare various reports.
- Assist in maintaining stock and inventory of all assigned equipment, supplies, and software, requesting computer-related equipment as necessary.
- Assist in assuring compliance with the college's acceptable use policy in the lab setting.
- Assist in scheduling and preparation for special events that require some level of access to laboratories.
- To manage laboratory(s) for specialized instructional applications. Responsible for supervision of all operations of the computer laboratory, including scheduling, user assistance, software management, hardware integrity, and planning for future needs.

6.1.2.4 Knowledge, Skills and Abilities required of Laboratory-in-Charge

- Knowledge of college policies, procedures, and practices with the ability to answer and/or interpreting and applying these guidelines correctly in various situations.
- Knowledge of Information Technology Policy/Data Privacy Act
- Familiarity with a wide variety of personal computer systems and peripherals, including installation in freestanding and networked environments.
- Familiarity with microcomputer programming languages and Internet applications.
- Familiarity with commercially available operating system, desktop publishing, word processing, database, presentation, organization and spreadsheet software packages.
- Working knowledge of networking concepts, routers, switches, hubs, and servers.
- Working knowledge of PC-related hardware, chip and board installation, and repair techniques, and other instructional technology.
- Familiarity with multimedia applications and computer peripherals such as scanners, CD-ROM, video projectors, audio systems, and interactive whiteboard systems.
- well-developed interpersonal skills, including the ability to establish and maintain cooperative working relationships with other employees at all levels.
- Ability to supervise and train employees, including organizing, prioritizing, and scheduling work assignments.
- Able to remain current in all aspects of data processing, word processing, and/or networks related to job assignments.
- Able to conduct workshops intended to instruct faculty in use of classroom technology.

6.2 Duties and Functions of the Computer Technician

- Maintain smooth operation and improve the services of the laboratories.
- Ensure that the equipment is in good condition.
- Install, maintain, troubleshoot, and repair computer systems' hardware, peripherals, and software.
- Guide students and faculty in the use of hardware and software applications.
- Assist students and teachers with printing and word-processing problems.
- Research new computer programs which may enhance computer-aided instruction.
- Make recommendations on new hardware and software.
- Update Laboratory-in-charge with the parts and supplies to be purchased.
- Setup and maintain the computer laboratory.
- Maintain, update, and do the inventory of all computer equipment and software.
- Establish computer rules, procedures, and routines.
- Assist the faculty if there is a non-functional computer during the course of the hands-on activities.
- Prepare requisitions for computer hardware and software purchases.
- Assist at training sessions for teachers and other staff.
- Assist with setting-up and maintaining computers.
- Administer the Local Area Network (LAN) and connections to the Wide Area Network (WAN).
- Keep and record the licenses of the software.
- Maintain computer hardware and software.

7.0 Rules and Guidelines

7.1. Specific Rules and Guidelines

The ICT Laboratory rules and regulations are not there to spoil anyone's fun. We have a large number of students all using the same facilities, so it is important that there are some procedures in place, which help to maintain the smooth running of the computer laboratories. Computers are provided for use in support of approved course work and should be treated as a shared work tool, rather than a means of passing the time between classes. CSPC ICT Laboratories is a privilege, not a right, and any abuse may result in the loss of laboratory privilege. Here are some rules and guidelines strictly implemented.

Faculty

1. Instructors shall inspect all the computer equipment (System Unit, Monitor, Wired/Wireless Mouse, Wired/Wireless Keyboard, Web Cam, Microphone, etc.) based on the checklist of equipment and peripherals for each laboratory before and after class and confirmed by the Laboratory Technician and Laboratory-in-Charge. The faculty shall be financially liable for the damage and loss of any computer and its accessories.
2. Instructors shall closely monitor the conduct of their students while they are inside the laboratory. The instructor shall not be allowed to leave the class during the instructor's assigned laboratory hours except for unavoidable circumstances but must assign substitute faculty to monitor the students. The faculty should perform the 5S (sort, set in order, shine, standardize, and sustain) before and after each class.
3. The faculty should assign a permanent seat plan for each student.
4. In borrowing the laboratory key, the faculty must fill out a logbook indicating the time borrowed and

returned.

Student

1. The student should wear a proper uniform and ID. P.E. uniform is not allowed.
2. Students must record their details in the logbook provided.
3. The student should only sit in their assigned seat based on the seating plan.
4. The student must check the computer unit and its peripherals attached before using it. The student must immediately inform the instructor if there's any defect, error, or damage observed on the computer (hardware/software) assigned or if there are any missing peripherals (mouse, keyboard, etc.). The instructor should immediately report the matter to the Laboratory-in-charge or Laboratory Technician assigned for immediate action needed. The students assigned to each computer are financially liable in case of loss or damage.
5. Students are prohibited from loitering inside the laboratory, especially if there is no faculty inside.
6. Students are not allowed to bring food and beverages inside the laboratory. Eating, drinking, smoking, and littering are prohibited inside the computer laboratory.
7. Users are responsible for saving their documents on their own flash drives, any information saved or installed on the system hard drive will be deleted once the Computer is rebooted (restarted).
8. No one is allowed to alter or delete the configuration settings of any computer laboratory equipment. Tampering, deleting, or modifying CMOS/BIOS' settings, IP Configuration, system parameters, or system files stored on the hard disk are strictly prohibited.
9. No student or personnel shall be allowed to attach or detach any peripheral to and from any equipment or devices without explicit permission from the Computer Lab-in-charge. Users are not allowed to attach personal devices such as flash drives to the computer laboratory's network without permission from the instructor.
10. Accessing pornographic, gambling, hate/discrimination, torrent, and other unsafe sites are strictly prohibited.
11. Students are not allowed to install, update or download any software on any computers inside the laboratories. It is also forbidden for users to boot from any bootable devices to run software on any computer in the laboratory. In cases that there is a need to install, update, or download software or boot from another device, the instructor must seek approval from the computer lab-in-charge. However, if there is a need to install application software, the instructor should heads-up the laboratory-in-charge for the said installation.
12. Playing games is not allowed inside the computer laboratory, this includes video games, card games, and other games. However, in cases where the topic is related to games, the instructor must inform the computer lab-in-charge or the computer technician.
13. Anyone who is causing disturbance, trouble, and exhibiting hostile or threatening behavior will be requested to leave the computer laboratory.
14. Printing of manuscripts, business letters, banners, personal documents and research works are not allowed in the laboratory.
15. The one-person, one-machine policy is strictly enforced. Watchers will be asked to leave.
16. Proper computer laboratory etiquette must be observed;
Ensure that no trash is left behind.
 1. Turn off computer units and arrange the computer peripherals (mouse, keyboard, and headset) after use.
 2. Wearing hats/caps inside the laboratory is not allowed.

3. Chairs must be returned properly to their original places.
4. The orderly dismissal must be observed by the instructor and the class.
17. Theft, vandalism, or abuse in any form is a grave offense and shall be dealt with accordingly.

7.2 Guidelines in Open Laboratory

This is to provide an avenue for students who want to practice skills, do assignments, have consultations with faculty, and complete other work-related activities for the completion of their thesis. The use of an open laboratory policy will be possible upon a request letter from the student duly approved by the department dean. Also, students should indicate their preferred time/slot when utilizing the computer laboratory services.

8.0 Laboratory Resources

8.1 Laboratory Hours

The availability of the computer laboratories varies every semester and summer depending on the course/subject offered by the department.

The laboratory is available for use 8hrs/day, six days/week. Laboratory staff is generally available during working hours. Use of the laboratory during off-hours and weekends is subject to approval from the college dean. The laboratories routinely shut down between semester breaks for general equipment and facilities maintenance in preparation for the opening of the next semester. Shutdowns may be extended to accommodate special projects.

8.2 Hardware and Software Management System

Hardware and software acquisition

- a. Hardware and software should only be acquired when it can be justified as the most efficient and effective course for the College as cleared by ICTech Director upon the submission of the assessment report of the designated laboratory technician.
- b. It is not necessarily the case that the cheapest will be preferred, but the most beneficial to the College and the end-user who will be using the facility subject to the provision of RA 9184.
- c. All unlicensed propriety software that is illegally copied is strictly prohibited and must not be installed in any computing facility of the College. The designated ICTRs staff, upon the direction of the ICTRs Head is authorized to delete/uninstall such software without prior notice.

8.3 Internet Services

Internet services are available at the laboratory, however, non-internet subject will not able to utilize the service.

8.4 Storage of Personal Belongings

Students are allowed to bring their bags inside the laboratory. However, the laboratory staff will not hold liable for any loss of your personal belongings.

9.0 Computer Utilization

9.1 Equipment Use

In order to utilize the equipment at CSPC Computer Laboratory, the instructor should heads-up the laboratory staff that they will use the computer laboratory and it should be in accordance with the class schedule approved by the College Dean. However, for outside laboratory schedules, the faculty should provide the laboratory staff with the letter approved by the department deans.

9.2 Equipment Reservations

For reservations outside the laboratory class schedule, the faculty should provide communication asking for approval from the department deans for the utilization of the computer laboratory.

Here are guidelines for equipment reservation etiquette:

- Reserve just the amount of time you realistically need (don't over-reserve).
- Remove any reservation that you will not be able to use.
- No reservation time for others.
- There is a grace period of 15 minutes, after which someone who does not show up loses his/her reservation.

10.0 Repair, Maintenance and Disposal Laboratory Equipment

Safety in the workplace is the utmost priority for CSPC ICT Laboratories. The Management of Information and Communication Technology, particularly the repair and maintenance division, is committed to maintaining and improving safety in the laboratory and to ensuring compliance with the policies of the institution's accrediting body. To report a safety concern, notify a laboratory-in-charge or computer technician.

Here are some warning signs for computers and parts replacement and upgrades:

1. Replace your computer once every five years. That's based on a cost analysis plus the average time it takes to wear out the internal parts of the computer. Five years for desktops, and four years (4) for laptops.
2. Can't Install the Latest Operating System
3. Can't Run the Latest Apps
4. It Gets Slow
5. Noisy Fans
6. Spend More Time Fixing It Than Using It

10.1 Procedure of performing preventive maintenance and corrective maintenance action

	DETAILS	RESPONSIBILITY
1.	Identifies building/equipment due for preventive maintenance	In-Charge
2.	Perform PM work and further checks building/equipment.	In-Charge

3.	Prepares pre-repair inspection if repair or replacement is needed with attached purchase request (PR) specifying required materials, have it signed by the end-user, counter signed by Supply Officer (SO) and for approval by the VPA or President.	In-Charge
4.	Forward PR to Disbursing Officer for the release of petty cash for the procurement of materials, or forwards to the Budget Officer for preparation of ABC who in turns endorses PR and ABC to BAC Secretariat.	College President
5.	Facilitates signing of ABC and PPMP prepares quotation, request for bid offers	BAC Secretariat/BAC
6.	Facilitates inspection of materials by the Inspecting Officer if procured through petty cash, If procured by alternative mode, Supply and Property Office facilitates delivery and inspection of materials and releases the same to In-charge.	In-Charge/Supplies and Property Office.
7.	Facilitates conduct of repair/replacement in coordination with Supply and Property Office. The preventive maintenance staff indicates the status in the checklist	Maintenance Personnel

10.2 Procedure for all unserviceable properties for disposal returned by the accountable officers to the Supply & Property Office

1	The laboratory-in-charge shall accomplish return slip for unserviceable property	Laboratory-in-Charge
2	The Property Custodian prepares and submit summary of unserviceable properties for disposal to the disposal & appraisal committee	Property Custodian
3	The disposal & appraisal committee conducts disposal activities	Disposal & Appraisal Committee
4	The College President approves/disapproves recommendation of the Disposal & Appraisal Committee	College President
5	The Property Custodian facilitates the actual disposal in coordination with other Disposal Committee members	Property Custodian/D&A Committee, Winning bidder

Disposal of desktop/laptop computers that are believed and declared to be defective as approved by the College President is delegated to the Supply and property office following guidelines of disposing government properties as provided in existing guidelines of the College. Software licenses of disposed computers may be transferred to newly purchased or older types of computer, in accordance with the terms of such license. (*CPSC-ICTR*)

11.0 Safety Precautions

This section concerns laboratory safety. Individuals are safer when safety requirements are followed. They also assist to safeguard equipment from harm.

11.1. General Safety

Safe working conditions help prevent injury to people and damage to computer equipment. A safe workspace is clean, organized, and properly lighted. Everyone must understand and follow safety procedures.

Follow the basic safety guidelines to prevent cuts, burns, electrical shock, and damage to eyesight. As a best practice, make sure that a fire extinguisher and first-aid kit are available in case of fire or injury. Poorly placed or unsecured cables can cause tripping hazards in a network installation. Cables should be installed in conduit or cable trays to prevent hazards.

This is a partial list of basic safety precautions to use when working on a computer:

- Remove your watch and jewelry and secure loose clothing.
- Turn off the power and unplug equipment before performing service.
- Cover sharp edges inside the computer case with tape.
- Never open a power supply or a CRT monitor.
- Do not touch areas in printers that are hot or that use high voltage.
- Know where the fire extinguisher is located and how to use it.
- Keep food and drinks out of your workspace.
- Keep your workspace clean and free of clutter.
- Bend your knees when lifting heavy objects to avoid injuring your back.

11.2. Electrical Safety

Follow electrical safety guidelines to prevent electrical fires, injuries, and fatalities in the home and the workplace. Power supplies and CRT monitors contain high voltage.

CAUTION

- Do not wear the antistatic wrist strap when repairing power supplies or CRT monitors. Only experienced technicians should attempt to repair power supplies and monitors.
- Some printer parts become hot during use, and other parts might contain high voltage. Check the printer manual for the location of high-voltage components. Some components retain a high voltage even after the printer is turned off. Make sure that the printer has had time to cool before making the repair.
- Electrical devices have certain power requirements. For example, AC adapters are manufactured for specific laptops. Exchanging power cords with a different type of laptop or device may cause damage to both the AC adapter and the laptop.

11.3. Fire Safety

Follow fire safety guidelines to protect lives, structures, and equipment. To avoid an electrical shock and to prevent damage to the computer, turn off and unplug the computer before beginning a repair.

Fire can spread rapidly and be very costly. Proper use of a fire extinguisher can prevent a small fire from getting out of control. When working with computer components, be aware of the possibility of an accidental fire and know how to react. Be alert for odors emitting from computers and electronic devices. When electronic components overheat or short out, they emit a burning odor. If there is a fire, follow these safety procedures:

- Never fight a fire that is out of control or not contained.
- Always have a planned fire escape route before beginning any work.
- Get out of the building quickly.
- Contact emergency services for help.

- Locate and read the instructions on the fire extinguishers in your workplace before you have to use them.

Be familiar with the types of fire extinguishers used in your country or region. Each type of fire extinguisher has specific chemicals to fight different types of fires:

- Paper, wood, plastics, cardboard
- Gasoline, kerosene, organic solvents
- Electrical equipment
- Combustible metals

It is important to know how to use a fire extinguisher. Use the memory aid P-A-S-S to remember the basic rules of fire extinguisher operation:

P: Pull the pin.

A: Aim at the base of the fire, not at the flames.

S: Squeeze the lever.

S: Sweep the nozzle from side to side.

11.0 Sanctions

Willful violations of the above provisions shall constitute proper investigation and disciplinary actions. Violators of these guidelines may be subject to any, but not limited to, the following sanctions:

1. Admonition
2. Temporary or permanent suspension of computer laboratory privileges
3. Dismissal from the College.

Any user who commits serious offenses, such as stealing computer items, accessories or manuals; intentionally damaging the computing facilities, equipment or furniture in the computer room, may be permanently excluded from using all services of the Computer Laboratory and will be required to pay for the cost of any damage or loss resulting from the offense(s). The offense(s) may also be reported to the University authorities for further disciplinary action.

The final authority on suspension, dismissal and other sanctions shall be decided by the University President subject to confirmation of the Board of Trustees.
